

Michael Lynn

AI Adoption Engineer & Developer Productivity Leader

Philadelphia, PA · mlynn.org · linkedin.com/in/mlynn · github.com/mrlynn · @mlynn

AI Adoption Engineer at Cursor, creating and presenting workshops and AI education programs that help engineering teams adopt AI-assisted development. 25+ years across software engineering, infrastructure, enterprise architecture, and developer platforms — including nearly a decade driving developer enablement and AI adoption at MongoDB. Trusted partner to VP Engineering and CTO stakeholders on rollout strategy, developer enablement, and measurable productivity outcomes.

CORE STRENGTHS

Enterprise AI Deployment & Adoption Strategy · Developer Workflow Optimization & SDLC Integration · Executive Stakeholder Engagement (VP, CTO) · Strategic Account Planning & Expansion · RAG Architectures & Vector Search · Prompt Strategy & AI Context Configuration · Cross-Functional Post-Sale Leadership · Technical Enablement & Workshop Design

EXPERIENCE

AI Adoption Engineer, **Cursor (Anysphere)**

Remote · 2026 – Present

Create and present workshops and AI education programs that help engineering teams and developers adopt AI-assisted development with Cursor.

- Create and present hands-on workshops that teach engineering teams how to adopt AI-assisted development workflows with Cursor.
- Build AI education and enablement programs — curricula, labs, and live sessions — that accelerate developer proficiency and adoption.
- Partner with engineering organizations to integrate AI-native tooling into their existing SDLC and day-to-day development practices.
- Translate real-world adoption patterns and developer feedback into improved enablement content and product insight.

Principal Staff Developer Advocate, **MongoDB**

Philadelphia, PA · 2016 – 2026

Led AI adoption and developer enablement for MongoDB's priority enterprise accounts across financial services, healthcare, and retail.

- Partnered with VP Engineering and CTO stakeholders to align AI and data platform adoption with business and engineering objectives.
- Designed and delivered Developer Day programs used globally to drive hands-on product adoption and usage growth.
- Advised enterprise engineering teams on AI architecture patterns including RAG, vector search, semantic retrieval, and agent workflows.
- Collaborated with Field Engineering and Sales to deliver seamless post-sale onboarding and expansion.
- Translated structured customer feedback into product roadmap influence across AI and search capabilities.

Enterprise AI Rollout & Enablement

- Guided engineering teams in production deployment of RAG-based systems using MongoDB Vector Search.
- Developed repeatable AI enablement playbooks for secure and compliant environments including HIPAA workloads.
- Led architecture whiteboarding sessions integrating AI workflows into existing SDLC pipelines.
- Built open-source tooling adopted by developers implementing retrieval-augmented systems.

Earlier at MongoDB — Worldwide Director of Developer Advocacy · Senior Solutions Architect

- Led the global developer advocacy organization, setting strategy for developer engagement, content, and community growth.
- Advised enterprise engineering teams on production architecture, performance optimization, and cloud migration strategy.
- Drove adoption across large engineering organizations through structured onboarding and technical workshops.

Vice President & Global Head of UNIX Engineering, **Fortune 50 Financial Services (Merrill Lynch)**

2000 – 2015

Owned global platform engineering strategy supporting mission-critical financial workloads, spanning roles at Merrill Lynch, Bank of America, BMC Software, and Medallia.

- Led global distributed engineering teams responsible for platform stability, scalability, and security.
- Drove automation and standardization initiatives improving operational efficiency and deployment consistency.
- Partnered with application and business leadership to align infrastructure strategy with enterprise goals.
- Managed large-scale infrastructure environments supporting high-availability financial systems.

SELECTED ENTERPRISE IMPACT

- Enabled AI and vector search adoption across Fortune 500 financial services organizations.
- Delivered hands-on enablement programs reaching thousands of developers globally.
- Influenced product roadmap through structured enterprise feedback loops.
- Built open-source tooling simplifying RAG implementation with MongoDB Atlas.

SELECTED PROJECTS

mongodb-rag — Open-source NPM library simplifying vector similarity search, caching, batch processing, and indexing for RAG applications.

vai (Voyage AI) — AI-powered workflow & CLI platform integrating semantic code search and MCP server capabilities.

MongoDB Next — Next.js + MongoDB scaffolding framework for efficiently building modern applications.

MongoDB Developer Days — Global hands-on workshop curriculum covering data modeling, aggregation, vector search, and AI application patterns.

Design Review Technical Enablement — 120-page, 12-category LMS enabling internal technical staff to deliver effective design reviews with enterprise architects.

TECHNICAL SKILLS

Data & AI Platforms

MongoDB Atlas, Vector Search, Atlas Search, Queryable Encryption, Aggregation Pipelines, Change Streams

AI & Machine Learning

RAG, Embedding Models, Semantic Search, AI Agent Workflows, LLM Integration, Prompt Engineering

Development

Cursor, JavaScript, Node.js, Python, React, Next.js, REST APIs, Model Context Protocol

Infrastructure & DevOps

Kubernetes, Docker, AWS, GCP, Azure, UNIX/Linux Systems Engineering

Developer Productivity

AI-assisted development workflows, enterprise rollout strategy, workshop facilitation, executive technical briefings

SPEAKING & PUBLICATIONS

- Speaker at AWS re:Invent and MongoDB.local on AI and data platform evolution.
- Founder & leader of MongoDB User Groups and enterprise workshops.
- Co-host of The MongoDB Podcast — 160+ episodes on developer tooling and applied AI.
- Author of technical writing on AI, vector search, and database best practices.

EDUCATION & DEVELOPMENT

Ongoing professional development in AI, machine learning, and modern application architecture. 25+ years of applied experience across enterprise infrastructure, software development, and data engineering.
