

Michael Lynn

Product-minded builder · AI & developer platforms

Philadelphia, PA · linkedin.com/in/mlynn · github.com/mrlynn · mlynn.org · +1 215-866-6036

SUMMARY

Product-minded builder who ships real software: AI tools, autonomous agents, developer platforms, and full products, and measures success by business impact: revenue, adoption, and developer productivity. 25+ years spanning hands-on engineering, enterprise infrastructure, and developer relations, with deep credibility among senior technical leaders in financial services and regulated industries. Equally at home building 0-to-1 and earning trust in the C-suite.

RECENT PROJECTS

Claude API Fundamentals course

A hands-on course that teaches the Anthropic Messages API by building a production support-triage service. Eleven labs cover structured outputs, tool use, streaming, evals, and guardrails, with solutions, an instructor guide, interactive playgrounds, and a live, spend-capped demo app. TypeScript, Python/FastAPI, Zod, Next.js, MongoDB Atlas.

TRIAGE.MLYNN.DEV | GITHUB.COM/MRLYNN/CLAUDE-TRIAGE-API

Lozenge

Native macOS teleprompter and meeting companion (SwiftUI, no Electron). The prompter follows your voice, sits under the camera notch, and scores each take for pace and filler words. Listen mode transcribes live, labels speakers, and pulls research cards from your own docs. Bring your own model key or run local with Ollama.

LOZENGE.AI

LightningHire

AI-powered hiring platform with automated candidate evaluation. Next.js 15, MongoDB, NextAuth v5, Anthropic SDK. GPT-facing backend adapter and Chrome extension.

LIGHTNINGHIRE.COM

VAI

Desktop AI development tool and autonomous-agent platform. MCP tool specifications for code search, marketplace workflow templates, Electron-based packaging.

EXPERIENCE

SpaceXAI — AI Adoption Engineer

AUG 2026 – PRESENT

Help large engineering organizations make AI coding adoption real, designing and running hackathons, Customer Developer Days, and hands-on workshops that give developers a reason to change how they work.

- Partner with AI Deployment Managers and Customer Success to identify where adoption is stuck, then build the right intervention for that account.
- Create repeatable event playbooks, agendas, judging rubrics, and retrospectives. Troubleshoot with developers in real time.
- Turn engagement outcomes into practical lessons for account teams and Customer Education. The goal is not attendance. It is sustained change in how teams build software with AI.

Cursor — AI Adoption Engineer

MAY 2026 – AUG 2026

Led AI adoption and developer enablement across Cursor's top-100 enterprise accounts (financial services, healthcare, retail).

- Designed and delivered a CLI-first Claude Code → Cursor migration program for a large derivatives-trading firm, with live terminal demos, skills, rules, and MCP.

- Built reusable enablement assets adopted by the field: an internal deck-generation tool with early ADM adoption, a standardized 101/201 curriculum with embedded facilitator guides, and a hackathon-in-a-box program.
- Designed a tiered "champion" framework to drive durable, self-sustaining adoption across accounts.
- Partnered with FE, ADM, and SA teams to standardize how Cursor is positioned and deployed at scale.

MongoDB — Remote / Philadelphia

JAN 2016 – MAY 2026 · 11 YRS

Principal Staff Developer Advocate · Manager, Strategic Developer Relations

MAR 2018 – MAY 2026

Led strategic developer engagement for MongoDB's priority enterprise accounts and its global developer-advocacy organization.

- Built open-source tooling adopted by developers implementing retrieval-augmented systems on MongoDB Vector Search.
- Provided hands-on technical contributions, guiding engineering teams through production deployment of RAG-based systems.
- Designed and delivered Developer Day programs used globally to drive hands-on product adoption and usage growth.
- Developed repeatable AI enablement playbooks for secure, compliant environments including HIPAA workloads.
- Led architecture sessions integrating AI workflows into existing SDLC pipelines for performance, scalability, and security.
- Built trusted-advisor relationships with VP Engineering and CTO stakeholders, aligning platform adoption with business objectives.
- Translated structured customer feedback into product-roadmap influence across AI and search capabilities.
- Set strategy for global developer engagement, content, and community growth.

Sr. Solutions Architect

JAN 2016 – MAR 2018

Owned technical pre-sales and solutions architecture for MongoDB's enterprise prospects and priority accounts.

- Built and led a technical enablement program, creating the content and teaching incoming Sales, Account Managers, and Solutions Architects, with major, measurable impact on sales and pre-sales cycles.
- Designed reference architectures and hands-on workshops that shortened evaluation-to-adoption for enterprise prospects.
- Served as trusted technical advisor through complex evaluations, POCs, and production deployments.

Medallia — Solutions Consultant · Business Development Solutions Consultant

JUN 2013 – DEC 2015

- Drove technical pre-sales, customer solution design, and enterprise deployments as a Solutions Consultant.
- Partnered with sales and product teams to align technical solutions with customer outcomes and accelerate evaluations.

BMC Software — Pre-Sales Software Consulting Manager · Senior Software Consultant

JAN 2011 – JUL 2013

- Player-coach manager leading a team of pre-sales software consultants supporting the enterprise sales and account-management teams (2012–2013).
- Explained, demonstrated, and proved the value of server automation and cloud computing to bridge the gap between business and IT (2011–2012).

TD Ameritrade — Engineer Consultant

APR 2010 – JAN 2011

- Built an automated firmware/BIOS update utility on PXE/TFTP, improving the efficiency of hardware firmware deployment.
- Built a suite of Bash/Perl tools for server inventory data capture and analysis in support of SAS70 and other audit requirements.
- Led proof of concept and vendor evaluation for IP Address Management (IPAM), creating the evaluation framework behind the product decision.
- Owned external DNS maintenance for all TD Ameritrade and affiliated brands. Assisted in a large-scale, multi-phase data center migration.

Bank of America — Engineering Manager

OCT 2006 – APR 2010

- Led a team of engineers responsible for system design: hardware, software, infrastructure components, interfaces, scalability, and availability solutions meeting business requirements.
- Owned application and infrastructure integration, and third-level support: incident troubleshooting, analysis, resolution, and documentation beyond first- and second-level operations.
- Built the Server Visibility Tool for inventory and maintenance of a 2,500-server estate (ExtJS/JavaScript/PHP front end, Perl collectors, MySQL).

— Served as division lead for UNIX/Linux platform issues in a data center migration.

Merrill Lynch — Vice President, Head of UNIX Engineering

MAR 1997 — OCT 2006 · 9 YRS

- **VP, Head of UNIX Engineering** (2000–2006): owned UNIX/Linux OS and hardware standards, set platform roadmaps and strategic direction, and managed the engineering team maintaining those standards.
- **VP, Manager of Internet Support Services** (1998–2000): ran production implementation and maintenance of the firm's internet and intranet infrastructure, set server configuration and sizing guidelines, and managed a team of systems administrators.
- **Systems Administrator** (1997–1998): built and administered the Merrill Lynch Research web site and its multi-server production environment.

— CAREER HIGHLIGHTS

- Built and shipped multiple products end-to-end, from AI hiring platforms to autonomous-agent frameworks and developer tooling.
- Delivered hands-on enablement programs reaching thousands of developers globally.
- Built technical-enablement programs that measurably accelerated sales and pre-sales cycles across a global go-to-market org.
- Influenced product roadmap through structured enterprise feedback loops.

— TECHNICAL SKILLS

BUILD & AI

JavaScript Node.js Python React Next.js REST APIs
Model Context Protocol (MCP) AI agent workflows LLM integration Prompt engineering
Retrieval-augmented generation Embedding models Semantic search

DATA & PLATFORMS

MongoDB Atlas Vector Search Atlas Search Queryable Encryption
Aggregation Pipelines Change Streams Data Federation

INFRASTRUCTURE & DEVOPS

Kubernetes Docker AWS GCP Azure UNIX/Linux systems engineering

DEVELOPER PRODUCTIVITY

AI-assisted development workflows Enterprise rollout strategy Workshop facilitation
Executive technical briefings

— SPEAKING & PUBLICATIONS

- Speaker at AWS re:Invent and MongoDB.local on AI and data-platform evolution.
- Founder and leader of MongoDB User Groups. Frequent presenter at enterprise workshops.
- Creator and co-host of The MongoDB Podcast, 160+ episodes on developer tooling and applied AI.

— EDUCATION & PROFESSIONAL DEVELOPMENT

Pennco Technical Institute · Associate Degree in Specialized Technology, Computer Programming

1984 — 1987

Certifications. Red Hat Certified Engineer. MongoDB Skill certifications: Relational to Document Model · Schema Patterns and Anti-patterns · Schema Design Optimization · Vector Search Fundamentals · RAG with MongoDB · Secure MongoDB Atlas: AuthN and AuthZ · Secure MongoDB Self-Managed: AuthN & AuthZ · Networking Security: Atlas.

Ongoing professional development in artificial intelligence, machine learning, and modern application architecture.
